

# Installing the Social-Engineer Toolkit (SET) on Linux Mint

## Step 1: Update System Packages

Open your terminal and update the system:

```
sudo apt update && sudo apt upgrade -y
```

## Step 2: Install Required Dependencies

Install Git and Python 3:

```
sudo apt install git python3 python3-pip -y
```

## Step 3: Clone the SET Repository

Download the latest version of SET from GitHub:

```
git clone https://github.com/trustedsec/social-engineer-toolkit.git
```

## Step 4: Navigate to the SET Directory

Change into the cloned directory:

```
cd social-engineer-toolkit
```

## Step 5: Install SET

Run the setup.py installation script to install dependencies and configure SET:

```
sudo python3 setup.py install
```

## Step 6: Launch the Social-Engineer Toolkit

After installation, run the tool using:

```
sudo setoolkit
```

## Installing the Social-Engineer Toolkit (SET) on Linux Mint

If the above doesn't work, run it directly:

```
sudo python3 setoolkit
```

### Notes

- SET may prompt you to agree to license terms (e.g., for Metasploit).
- Always use SET in a legal and ethical manner, preferably in a lab or controlled environment.
- To update SET in the future, run:

```
cd social-engineer-toolkit && git pull origin master
```
